EXPERIENCE

Freelancing | Full-stack Developer

02/07/2025 – 30/11/2025

- Built a system for managing mess operations, including next-day open/close status and monthly user subscriptions.
 - Implemented QR-based attendance, where users scan to mark presence and the owner approves/rejects requests.
 - Added an absence option for users to help the owner estimate next-day meal counts.
- Live : hotelswami.pythonanywhere.com 🌐

Intern | Python Developer

06/01/2025 – 22/01/2025

Gyanteerth, Pune

- Learned and applied core Python concepts including data types, loops, functions, and file handling.
- Worked on real-world data science problems using Python, Numpy, Pandas and Matplotlib.
- Built basic Python projects such as a calculator, to-do list app, and data analyzer.

EDUCATION

B.E. in Computer Science | S.N.D. College of Engineering, Yeola, Nashik

2022 – 2026

Savitribai Phule Pune University

HSE | Arts, Commerce and Science College, Nandgaon, Nashik

2021 – 2022

Percentage: 77.67%

SKILLS

Technologies

Python (Pandas, Numpy, Scikit-learn), Django, Django Rest Framework (DRF/API's), Machine Learning, HTML/CSS (Tailwind CSS), C++, SQL

Databases

MySQL, PostgreSQL, SQLite

Tools

VS Code, PyCharm, Git, GitHub, Figma, Notion

PROJECTS

AI Powered Resume Screening System for HR Department | BE Final Year Project

Tech Stack : Python, Django, NLP (spaCy), Scikit-learn, Pandas, NumPy, REST APIs

- Developed an intelligent resume screening system using AI to automate candidate evaluation. The system includes a chatbot that assists HR in generating job descriptions and screening resumes.
- It analyzes resumes against job requirements and assigns a matching score, enabling efficient and data-driven shortlisting of candidates.
- Improves hiring accuracy, reduces manual effort, and enhances decision-making using analytics.

Hat and Jacket Detection system

Tech Stack : Python, YOLO, OpenCV, LabelImg, Gradio, Numpy

- Developed a custom object detection model to identify safety hats and jackets worn by construction workers.
- Labeled training images using LabelImg and trained a YOLO-based model for accurate detection.
- Deployed an interactive web application using Gradio, allowing users to upload images/videos for instant PPE detection and visualization.

E-Commerce Website

Tech Stack : Python, Django, HTML, Tailwind, SQLite, Django ORM, Git

- Designed & developed a fully functional E-Commerce website to sell variety of products.
 - Implemented features such as user authentication, product browsing, shopping cart, order placement and admin product management.
 - Integrated dynamic product listing, image uploads, and category-wise filtering using Django's templating and ORM.
